Notes on Sources

- The population numbers for these maps come from the Wisconsin Department of Administration's Demographic Services Center, which publishes population projections each decade based on the decennial U.S. Census. Numbers for the map showing population in 2000 come from Census 2000, Summary File 1.
- The maps were created using ArcMap 9.0, and imported to PowerPoint as PDF files.
- Thanks are due to UW Extension of Waushara County, which created a similar set of population projection maps and inspired this production.
